

THE ANATOMY OF A BLAZE KING

CRAFTED TO AMAZE

Catalytic Thermometer

The catalytic thermometer keeps you informed about your fuel load and catalyst performance. Monitoring this handy device allows you to light your stove with a single match and burn all winter long!

Thermostat (No electricity required)

Our thermostat continuously adjusts the heat output to maintain an even temperature in your home. Delivering up to 40 hours heating time on low, depending on model.

Catalytic Combustor

- Prevents up to up 90% of potential smoke from entering your chimney.
- It's secondary burn removes almost all smoke and gases.
- Delivers the highest efficiencies of up to 82%.

By-Pass Handle

A simple lever to clear all the smoke during loading and start-up.
By-Pass Plate

It's a LOT deeper than just a big FireBox!

- Up to 9" depth to the door opening makes re-loading safer.
- Most efficient stoves in North America as listed by EPA.
- Burn 1/3 less wood through engineered efficiency.

Ash Drawer

Complete combustion means a lot less ash. Standard or optional ash drawers make removal of ashes a snap.

Fan

Dual, variable speed fans help move twice as much heat further into your home.

Blaze King | Controlled Heat. All Night Long.
