

# The Great **Blaze King** Warranty!

## Blaze King Burner

Everyone loves a great looking fire and you will not find a more realistic fire than in a Blaze King® gas appliance. But a great fire is not possible without a great burner and attractive set of logs. Blaze King® burners are made from aluminized steel, offering a far greater lifetime than ordinary burners.

## Heat Exchanger

This a real heat exchanger! Blaze King® gas appliances feature heat exchangers designed to capture every possible Btu for your home instead of letting it escape outside! Blaze King® delivers great efficiencies with heavy duty heat exchangers.

## Fan Assembly

This is a fan assembly. There are many types used, but all essentially do the same thing, help to move hot air around your home. Blaze King® gas appliance fans are covered for a full five years, parts & labor!

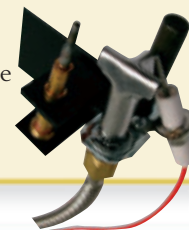

## Gas Valve

This is a gas valve. It regulates the gas flow to your appliance. When you purchase a Blaze King® gas appliance, the valve & labor are both covered for a full 5 years.

## Thermocouple or Thermopile

This is a thermocouple or thermopile. Gas units have one or both. When the flame from the pilot makes contact with this essential part, gas continues to flow through the valve. The full-five year warranty from Blaze King® covers the little parts as well!

Before you purchase any gas heater, read the Blaze King® warranty! Only Blaze King® provides a full five years on both labor and parts. No small type here, just the facts. When you buy your new Blaze King® it comes with peace of mind, superior efficiencies and the best warranty, bar none!

\*See owners and operators manual for complete details.

**Blaze King** Is Peace of Mind!
